Frequently Asked KK-Bioscience

We aim at providing products and services that satisfy customers.

How can l place an order with KK?

There are two options:
Send an email to sales@kk-bioscience.com, a representative will contact you via e-mail SHORTLY
Direct contact KK via Tel: +86 574 6517 9998 (direct)

Can I place an order online?

Yes, you can visit our website www.kk-bioscience.com to place order. Or you can send email to us.

How about the delivery time?

Approx 7-10 days for sample order. Bulk order depends on the quantity. Please contact our sales representative to get your lead time. If you need a rush order, contact our sales representatives and they will help you.

How can I get samples promptly?

Kindly contact our sales representatives via email or phone AND share with us the sample you need and the courier account No. (such as Fedex/ UPS/DHL etc.). We will send the samples through your courier.

How about the Minimum Order Quantity (MOQ)?

We are factory and produce many kinds of products. Each kind of product has its own MOQ according to the production requirements. Please contact our sales representatives for the MOQ for the product which u interest.

Can I customize the packing/printing/ colour of the product?

Yes, we offer OEM/ODM services. Our technical team will help you to realize your idea.

Can you please quote me the FOB or CIF Price?

In general, our quotation is based on EXW price. If you are looking for the FOB or CIF price, please share your detail shipping information with our sales representative, our representative will quote you accordingly with our forwarder.
Or you can recommend your shipping company to re-check the freight cost for you.
Our principle is to help you find the most reliable shipping company, which offers competitive freight fee, and deliver your cargo safe and in-time.

Can I customize the cold pad for my target customer?

Yes, we offer OEM/ODM services. Our technical team will help you to bring your thought to the reality, meeting the special demand of your own customers.

How can I trust the quality of the product?

KK has a professional QC team and applied strictly QC inspection for each order before shipping.

What kind of certificate do you have?

CE, ISO13485, FDA and other certifications.

Pressure infusion bag

Infusion Bag is a safe,high-quality, cost effective and reliable device for intravenous and intra-arterial infusion treatment. And it is convenient to use, releasing the burden of doctors and nurses while their operating in the OR, ER, Trauma unit, ICU, and in post- anesthesia care.

Various kinds of PIB is available to meet different requirement.

Pressure infusion bag

Disposable

DIB series

The DIB series provides integrated hanger, mesh back and designed for single patient use.

DIB-500P

DIB-500PM

DIB-1000P

DIB-1000PM

DIB-3000P

DIB-3000PM

Features and benefits:

Strong Load-bearing capacity:Integrated hanger at top of bag to attach to IV pole, providing strong load-bearing capacity.

Easy visibility: Mesh back allows for easy visibility to fluids, nurse can observe fluid level clearly.

Easy operation: Plastic retention hook enables easy bag changing without having to remove the Infusion bag from the IV pole; keeps fluid bag in proper position while in use.

User friendly: Oval shaped bulb is designed for easy one-hand inflation

Disposable: Only for single patient use, Safer and more hygienic

Size available:

500CC | 1000CC | 3000CC

Optional choice:

Colour coded Plastic Manometer

360°colour coded Piston Gauge

Standard bulb

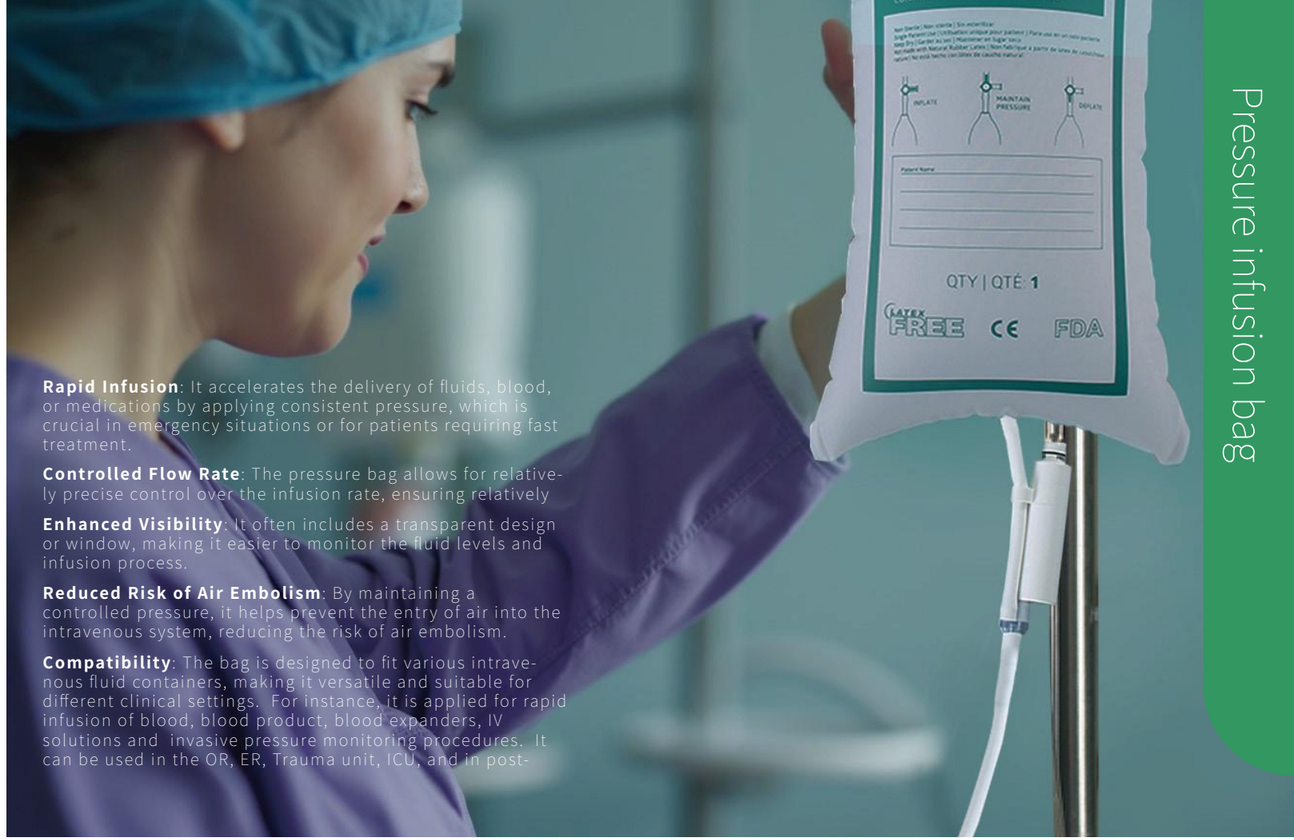

4#larger bulb

www.kk-bioscience.com

Rapid Infusion: It accelerates the delivery of fluids, blood, or medications by applying consistent pressure, which is crucial in emergency situations or for patients requiring fast treatment.

Controlled Flow Rate: The pressure bag allows for relatively precise control over the infusion rate, ensuring relatively

Enhanced Visibility: It often includes a transparent design or window, making it easier to monitor the fluid levels and infusion process.

Reduced Risk of Air Embolism: By maintaining a controlled pressure, it helps prevent the entry of air into the intravenous system, reducing the risk of air embolism.

Compatibility: The bag is designed to fit various intravenous fluid containers, making it versatile and suitable for different clinical settings. For instance, it is applied for rapid infusion of blood, blood product, blood expanders, IV solutions and invasive pressure monitoring procedures. It can be used in the OR, ER, Trauma unit, ICU, and in post-

GDIB series

The GDIB series provides string on the top of bag, mesh back and designed for single patient use.

Features and benefits:

Comfortable touch feeling: String at top of bag to attach to IV pole, providing comfortable touch feeling.

Easy visibility: Mesh back allows for easy visibility to fluids, nurse can observe fluid level clearly.

Easy operation: Plastic retention hook enables easy bag changing without having to remove the Infusion bag from the IV pole; keeps fluid bag in proper position while in use.

User friendly: Oval shaped bulb is designed for easy one-hand inflation

Disposable: Only for single patient use, Safer and more hygienic

TDIB series

The TDIB series provides integrated hanger, clear back for easy barcode scaning and designed for single patient use.

Features and benefits:

Strong Load-bearing capacity: Integrated hanger at top of bag to attach to IV pole, providing strong load-bearing capacity.

Easy visibility and barcode scanning: Clear back bags have wider profile for larger IV bags and allow nurses to scan barcodes through the clear back.

Easy operation: Plastic retention hook enables easy bag changing without having to remove the Infusion bag from the IV pole; keeps fluid bag in proper position while in use.

User friendly: Oval shaped bulb is designed for easy one-hand inflation

Disposable: Only for single patient use, Safer and more hygienic.

Size available:

500CC 1000CC

Clear panel enables full visibility of solution bag to monitorfluid level and easily scan patient barcode

DIB-MM-D series

The DIB-MM-D series provides integrated hanger, mesh back and Blood pressure monitor level accurate pressure monitor ability.

Features and benefits:

Strong Load-bearing capacity: Integrated hanger at top of bag to attach to IV pole, providing strong load-bearing capacity.

Accurate pressure monitor : A precise pressure manometer has been applied to monitor the pressure of the bag

Easy visibility and barcode scanning: Clear back bags have wider profile for larger IV bags and allow nurses to scan barcodes through the clear back.

User Frindly: The 3-way stockcock enable easy deflating by one hand

Pressure infusion bag

MRI

DIB-MRI

Features and benefits:

Special gauge spring has been applied to allow the conditional use in the MRI environment.

Strong load-capacity: Integrated hanger

Visibility: Mesh back allow to check the fluid status.

Intended purpose: The product is designed to apply pressure to the IV bag, thereby delivering a range of fluids and medications to the human body.

Size available:

500CC | 1000CC | 3000CC

MRI SAFETY INFORMATION

Static Magnetic Field(T)	7-Tor less
Maximum Spatial Field Gradient	19-T/m(1,900-gauss/cm)

DIB-MRI-3000P	Disposable Pressure Infusion bag, Mesh, 3000cc, Piston gauge, Luer connector	3000CC

DIB-MRI-C (MRI conditional)

DIB-MRI-C Pressure Infusion Bag products comply with the criteria for MRI Conditional items, which present no known risks in MRI environments when used according to the MRI safety instructions.

MRI conditional

(DIB-500PM with larger bulb)

MRI instructions for safe use:

(If the product is intended for MRI use please follow these instructions.)

For MRI procedures, secure the tubing with the white plastic clamp located between the luer lock connection and the pressure bag, ensuring it' s fully pressed below the last notch.

Disconnect the inflator from the luer lock fitting.

Do not bring the inflator into the MRI field, as metal in the piston gauge can interfere with the magnetic field and pose safety risks.

After removing the bag from the MRI field, re-attach the luer lock connection, making sure it' s tight and secure.

Release the clamp, re-check the pressure, and adjust as necessary.

Pressure infusion bag

Reusable

RIB series

The RIB series provides integrated hanger, mesh back and designed for durable use.

A mild detergent solution and water can be used to clean the bag before reuse.

Features and benefits:

Strong Load-bearing capacity: Integrated hanger at top of bag to attach to IV pole, providing strong load-bearing capacity.

Easy visibility: Mesh back allows for easy visibility to fluids, nurse can observe fluid level clearly.

Easy operation: Plastic retention hook enables easy bag changing without having to remove the Infusion bag from the IV pole; keeps fluid bag in proper position while in use.

User friendly: Oval shaped bulb is designed for easy one-hand inflation

Durable use: Bags are tear resistant and made from strong denier nylon. Reusable Pressure Infusion Bags provide a durable option for safe IV infusion procedures. It can be cleaned with a mild detergent solution and water before reuse.

Size available:

500CC | 1000CC | 3000CC

GRIB series

The GRIB series provides string on the top of bag, mesh back and designed for durable use.

A mild detergent solution and water can be used to clean the bag before reuse.

Features and benefits:

Comfortable touch feeling: String at top of bag to attach to IV pole, providing comfortable touch feeling.

Easy visibility: Mesh back allows for easy visibility to fluids, nurse can observe fluid level clearly.

Easy operation: Plastic retention hook enables easy bag changing without having to remove the Infusion bag from the IV pole; keeps fluid bag in proper position while in use.

User friendly: Oval shaped bulb is designed for easy one-hand inflation

Durable use: Bags are tear resistant and made from strong denier nylon. Reusable Pressure Infusion Bags provide a durable option for safe IV infusion procedures. It can be cleaned with a mild detergent solution and water before reuse.

TRIB series

The TRIB series provides integrated hanger, clear back for easy barcode scaning and designed for durable use.

A mild detergent solution and water can be used to clean the bag before reuse.

Features and benefits:

Strong Load-bearing capacity: Integrated hanger at top of bag to attach to IV pole, providing strong load-bearing capacity.

Easy visibility and barcode scanning: Clear back bags have wider profile for larger IV bags and allow nurses to scan barcodes through the clear back.

Easy operation: Plastic retention hook enables easy bag changing without having to remove the Infusion bag from the IV pole; keeps fluid bag in proper position while in use.

User friendly: Oval shaped bulb is designed for easy one-hand inflation

Durable use: Bags are tear resistant and made from strong denier nylon. Reusable Pressure Infusion Bags provide a durable option for safe IV infusion procedures. It can be cleaned with a mild detergent solution and water before reuse.

Size available:

500CC | 1000CC

GTRIB series

The GTRIB series provides string on the top of bag, clear back for the easy barcode scaning and designed for durable use.

A mild detergent solution and water can be used to clean the bag before reuse.

Features and benefits:

Comfortable touch feeling: String at top of bag to attach to IV pole, providing comfortable touch feeling.

Easy visibility and barcode scanning: Clear back bags have wider profile for larger IV bags and allow nurses to scan barcodes through the clear back.

Easy operation: Plastic retention hook enables easy bag changing without having to remove the Infusion bag from the IV pole; keeps fluid bag in proper position while in use.

User friendly: Oval shaped bulb is designed for easy one-hand inflation

Durable use: Bags are tear resistant and made from strong denier nylon. Reusable Pressure Infusion Bags provide a durable option for safe IV infusion procedures. It can be cleaned with a mild detergent solution and water before reuse.

SRIB series

The SRIB series provides evenly pressure to the whole bag, clear bag for easy monitoring and barcode scaning, easy-to-clean and reusable.

SRIB-500P

RIB-MM series

The RIB-MM series is durable and is designed for reusable use and easy to clean.

It is Detachable for bag and bladder and can be cleaned seperately.

RIB-500MM

Features and benefits:

Circumferential Bladder Construction: The infusion bags deliver a consistent flow rate for effective fluid management. The circumferential bladder construction facilitates uniform compression of the entire fluid bag, ensuring more reliable and consistent flow rates.

Easy to monitor and barcode scan: The infusion bag is highly transparent, making it easy to monitor fluid levels and scan barcodes without removing the bag.

Durable: The infusion bags, constructed from durable and easy-to-clean polyurethane, can be reused if desired.

Cost-Effective: The SRIB pressure infusion bag can be thoroughly cleaned and reused if desired, reducing the cost of use per time. The cleaning is suggested to follow the Instructions for use.

Convenient: Plastic retention hook enables easy bag changing without having to remove the Infusion bag from the IV pole; keeps fluid bag in proper position while in use.

Size available:

500CC | 1000CC

Features and benefits:

Easy visibility: Mesh back allows for easy visibility to fluids, nurse can observe fluid level clearly.

Durable: Reusable bags are made with tear-resistant, reinforced blue nylon with leak-resistant seams for added durability and easy cleaning.

Detachable bag and bladder: The bag and the bladder is detachable and can be cleaned seperately.

Qualified Metal manometer: The high qualified metal BP manometer is applied to offer accurate pressure monitor.

Size available:

500CC | 1000CC

Pressure Gauges

Piston Gauge
- Pressure range 0-300mmHg
- 360°gauge visibility
- Bleed valve prevents over-inflation

Piston Gauge MRI
- Special spring design for MRI conditional use
- Bleed valve prevents over-inflation
- Pressure range 0-300mmHg
- 360°gauge visibility

Aneroid Gauge
- Pressure rang 0-300mmHg
- Colour coded Plastic Manometer

Metal Manometer
- Pressure rang 0-300mmHg
- Accurate and clear pressure to read

Pressure control valves

3 way stockcock
- Easy operate by one hand
- 3 mode: Inflate/ Deflate/ Maintain Pressure mode
- Enabl deflating the pressure FAST

Thumb wheel valve
- Precise control of pressure
- Conveniently operated by one hand

Inflation Bulb

Standard bulb

Oval shaped bulb for comfort use.

4#Larger bulb
- For faster inflating

VTE Prevention Sleeve

VTE Prevention Sleeve is a preventive device that enhances circulation, reduces swelling, and minimizes the risk of deep vein thrombosis through adjustable, comfortable compression.

Our VTE Prevention sleeves can be adapted to a wide range of models, providing more comfortable options to the patients.

VTE Prevention Sleeve

DW series:

DW provides uniform intermittent compression with soft breathable lining.

DW-F

DW-C

DW-T

Features and benefits:

Sleeve helps provide uniform intermittent compression, inflating and deflating intermittently, and switching legs.

A soft, breathable lining and contoured edges enhance patient comfort by minimizing irritation and providing a more comfortable fit.

The thick foam cushioning at the tube exit port, combined with an angled hose that directs the tubing away from the patient, is designed to minimize the risk of pressure injuries.

Additional features: It includes detachable tubing to prevent tripping during ambulation and an extra-thick foam layer between the tubing and the patient.

Connector:

CV-T,Soft

Features and benefits:

Circumferential design: The circumferential design of the DVT sleeve compresses a larger surface area, effectively clearing blood from behind the valve cusp where deep vein thromboses commonly form. It delivers therapeutic compression regardless of the sleeve's position, potentially reducing nursing time.

Sequential inflation: The sleeve employs a sequential inflation of three separate chambers to achieve a 'milking' action on the leg, with each chamber inflating at varying pressures to enhance blood flow.

Two Touches options: Allows the user to choose between an economic Express DVT sleeve or a superior more soft and comfort sleeve

Additional features: It includes detachable tubing to prevent tripping during ambulation and an extra-thick foam layer between the tubing and the patient.

MDSQ series

MDSQ provides sequential intermittent compression with soft breathable lining.

MDSQ-F

MDSQ-C

MDSQ-T

Features and benefits:

Comfortable: Adjustable pressure settings and soft, pliable garments ensure patient comfort.

Uniform compression : Intermittent pneumatic compression delivers uniform, single-bladder, alternating compression and is available for the foot, knee, or leg.

Sequential compression: Sequential pneumatic compression generates a gradient compression wave through three separate bladders per garment, also available for the foot, knee, or leg.

Blood Pressure Cuff

A blood pressure (BP) cuff measures blood pressure, providing essential systolic and diastolic readings for cardiovascular health. It monitors hypertension, allowing for treatment adjustments, and aids in diagnosing abnormalities like hypertension and hypotension.

The cuff assesses treatment effectiveness by tracking medication and lifestyle changes. Healthcare providers use it for pre-surgery evaluations and routine health checks. Many individuals also use BP cuffs at home to monitor their blood pressure, particularly those with health conditions.

We have various type of BP cuffs, with different material and design to meet the dispasable or reuable use at home or hospital.

Blood Pressure cuff

Disposable

Disposable BP cuff

Size available:

infant	Child	Small Adult	Long Adult
Adult	Large Adult	Thigh	

Features and benefits:

Single-Use Design: These cuffs are intended for one-time use, minimizing cross-contamination risks.

Lightweight and Flexible: The non-woven fabric is typically lightweight, making it comfortable for patients and easy for

Hypoallergenic Material: Non-woven fabrics are often designed to be hypoallergenic, reducing the risk of skin irritation.

Integrated Fastening Mechanism: Velcro in the cuff provide secure placement without the need for additional materials.

Easy to use: Varialbe quick connector available to meet the use in different machine.

Variety of Sizes: Available in multiple sizes to accom-modate different arm circumferences, ensuring accurate readings for a wide range of patients.

Tube

Straight tubing in the medical field is a flexible, continuous conduit used for the direct and unobstructed flow of fluids or gases, designed for straightforward, reliable delivery in various medical devices and applications.the accurate and efficient measurement of blood pressure in the medical field, contributing to better patient care and diagnostic accuracy.

Tube

BP instruments tubing

Coiled tubing

Our durable, latex-free coiled tubing, available in TPU and PVC options, offers user-friendly adjustability, easy storage, and flexibility for various medical applications.

Usage scenario:

product color:

BLACK customization

Features and benefits:

Durability: Coiled tubing is durable and resistant to wear and tear, ensuring long-term use and reliability.

User Friendly: The spring shape design ensures a more comfortable adjustment feel. Users are able to adjust the length of the tube more effortlessly during use, and after use, the tube will automatically reset its length due to the elasticity. Our coiled tubes are designed to ensure that the user gets the best experience!

EASY STORAGE: The tube automatically springs back to its original length after use, no need for time-consuming and laborious winding. And it takes up less space for storage.

- **For use with all major brands of BP instruments**
- Coiled TPU tubing to facilitate blood pressure measurement when using wall or mobile instruments
- Luer connector included

Blood Pressure Hose/NIBP Horse

product color:

BLACK customization

Features and benefits:

Universal Compatibility: Many bayonet connectors are designed to be compatible with a wide range of NIBP monitors, enhancing versatility and reducing the need for multiple hoses or adapters.

Durability: NIBP hoses with bayonet connectors are made from TPU, making them resistant to wear and tear. This ensures long-lasting performance even in high-demand environments.multiple hoses or adapters.

Quick and Secure Connection: The bayonet connector ensures a fast and reliable connection between the hose and the blood pressure cuff or monitor. This minimizes the risk of accidental disconnections during use, which could affect the accuracy of blood pressure readings.

Easy to Use: The bayonet design allows for simple, one-handed attachment and detachment, making it convenient for healthcare professionals during fast-paced medical procedures.

Multi-lumen tube:

Our durable, latex-free Multi-lumen tube provides easy adjustment and reliable performance with its separable, tangle-free design.

8 Multi-lumen tube:

Color Plan:

BLACK	+	Green	+	customization		
BLACK*1	+	Green*3	+	customization*3		
BLACK*1	+	Green*5	+	customization*5		
BLACK*1	+	Green*7	+	customization*7		

Features and benefits:

Customisation available: the length of whole tube and single tube can all be customised to meet different use requirements and scenarios. Color coded can also be customised for clearer and quicker identification of different tubes by healthcare professionals.

Durability: Multi-lumen tube is durable and resistant to wear and tear, ensuring long-term use and reliability.

Stable and Reliable: Multi-lumen tube is supplied in smooth, tangle-free, and long continuous lengths. This specialized tubing is tough, durable, and chemically inert.

Separable design: Multi-lumen tube is a single unit made up of several separate but adjacent tubes of the same size, which stay together until they need to be separated and adjusted for length. After seperation, each tube has a smooth surface; these surfaces are free of blemishes, corners, flat spots and other defects that could interfere with sealing.

User Friendly: The separable design ensures a more comfortable adjustment experience. Users can freely separate the individual tubes for cutting and adjusting, solving the problem of non-adjustable using distance and the existence of height difference in the using scene.

LATEX FREE: Our Coiled tubing is ideal for people with latex sensitivities; Crafted from advanced non-latex materials this Coiled tubing is flexible, soft and stable for long-term use.

Inflation Bulb

An inflation bulb is a versatile, user-friendly and durable tool used for precise pressure control in both medical and industrial applications. The inflation bulb plays a fundamental role in the accurate and efficient measurement of blood pressure in the medical field, contributing to better patient care and diagnostic accuracy.

When applied to industrial products, it helps to inflate easiy by simply squeezing the bulb, getting rid of the power cord and fits various scenarios.

Inflation Bulb

Inflation bulb is a versatile and durable tool used for precise pressure control in medical and inflatable products.

Inner diameter of top(mm)	10.14
Outer diameter of top(mm)	12.71
End Bulb OD(mm)	10.14
Volume (oz/ml)	

Features and benefits:

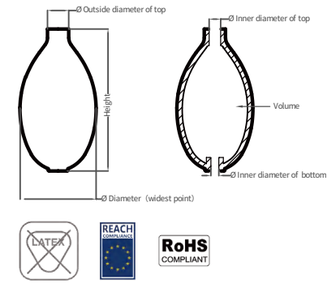

Durability: Our Uniquely formulated materials allow for greater durability.

Soft: Our Unique formula technology enables the softness of the inflation bulb can be adjusted

User friendly : Ergonomic design is applied in the shape of inflation bulbs, providing a more comfortable feeling and operating experience.

Easy operation: Equipped with thumb wheeled accessories, which enables users to operate with one hand.

Various type available: Various sizes and shapes of inflation bulbs are available for different groups of people and scenarios, such as Asians/Europeans/Americans, men and women, medical and industrial scenarios.

Check Valve

Cold Therapy System is intended for the treatment of post-surgical and acute injuries in order to reduce edema,swelling and pain.It provides aphysical care that can help speed recovery without resorting to drug.

It is intended for use by or on the order of healthcare professionals in hospitais, outpatient clinics,athletic training settings,empyrosis treatment or home settings.

Cold compression therapy machine

Chilling as surounded by iceberg.

Intermittent ACURATE pressure benefits revovery.

CTS-V4

Intermittent compression has been proven to be more effective than static compression because it moves the blood more effectively, helping push the swelling out of the system.

CTS-V4 cold compression unit designs to combine the benefits of intermittent pneumatic compression and cold therapy to reduce the pain and edema, enhance lymphatic function, encourage blood flow to prevent the Venous thromboembolism (VTE) and to help simulate tissues repair faster and better.

It is ideal for facility and home use. CTS-V4 cold compression unit can be easily transported from the hospital, physical therapy clinic or athletic training room to the patient' s home, extending the benefits of cold and compression.

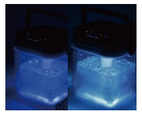

Two Modes:

Cold compression unit

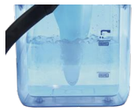

Cold only unit

Cold only mode VS Compression only mode

simple button design

Clear and higher ice-water ratio prolong the cold therapy

Combo quick connector

Features and benefits:

- Intermittent compression
- **Adjustable settings with safety protection:**

  Cold only:
  Low & Regular cold therapy setting
  Cold compression:
  Low & Regular compression setting
  Low=25mmHg, Regular=50mmHg average peak compression
- **Convenient**: Glory touch screen and easy to turn-on/off downlight enables patient to conduct at night.
- **Easy to use**: simple button design in a glory touch screen, a combo quick connection connector are adopted for easy operation and effective water leakage prevention.
- Thermal insulation clear basin ensure a longer lasting of cold, while it is light weighted to be portable.
- A higher 1.4:2 water-ice ratio provides better experience of cold treatment.
- Pad for specific body parts and universal are designed for better fit, wider coverage and more efficient recovery.

Cold Therapy | Compression | Intermittent

Safe | Lamplight | Low Noise<50db

Ordering Information

CTS-V4

Product size:24.8*25.5*28cm

Two Modes: Cold only unit
Cold compression unit

Ambient light:
Cold compression unit: Blue /white
Cold only unit: Blue

Universal cold compression pad

Provides effective cold therapy and intermittent sequential compression treatment.

Pad cooling area:30*36.5cm
Tube length: 20cm
Total pad size: 30*56.6cm

Universal pad for cold only

Pad for V4 is designed to be secure,ergonomic, effective and leak-proof.

Pad cooling area:32.5*30cm
Tube length: 20cm
Total pad size: 32*50cm

More pad available for various body parts

The manual measurements have a certain degree of error.

CTS-V3 series

Wireless control optional,
Programmable time
Quiet and Smooth Motor,
Adjustable Flow Rates,
Temperature display

Cold Therapy
Intermittent
Wireless controller (option)
Lamp light
Low Noise
working&resting customized program

	Running time	Resting time
Single mode	30,40,50,60,70,80,90	P0
Loop mode	30,40,50,60,70,80,90	10,20,30,40,50,60
Non-stop	00	

Features and benefits:

Blue ambient light: The gentle illumination of the blue ambient light aims to enhance overall treatment environment comfort and positively contribute to the psychological state of the user.And it can also provide a clear view of remaining ice day or night.

Transparent Double-Walled Bucket: Allows easy monitoring of ice levels with LED night visibility, and provides excellent insulation.

Low Noise Operation: High-quality brushless DC motor ensures quiet performance, creating a relaxed environment for effective pain relief.

Programmable and Wireless Control: Easy-to-use panel for 5 flexible working modes, flow rate, and timer settings, including loop mode for continuous therapy. Programmable timer including single mode, loop mode and non-stop mode. Users can customize the run time and rest time.Concise control panel easy to use.

Flexible Therapy Pad: Soft, pliable pad suitable for various body parts, enhancing therapy effectiveness with gentle compression and effortless water flow.

Clear basin & light for night

Simple button design

Quick connector

Size (L*W*H)	360*280*270mm
Weight	3.67kg(Empty)
Water Flow Rate	0.7L/min, 1L/min, 1.5L/min
Single therapy Time	Non-stop/60min for single mode

The manual measurements have a certain degree of error.

CTS-V2 series

Smooth Motor,
Programmable time
3 Flow Rates,
Lightweight,
Portable,
Temperature display

Size (L*W*H)	240*260*280mm
Weight	3.62kg(Empty)
Water Flow Rate	1L/min,1.5L/min,2L/min.
Single therapy Time	Non-stop/60min for single mode

The manual measurements have a certain degree of error.

Features and benefits:

Low Noise Operation: High-quality brushless DC motor ensures quiet performance, creating a peaceful environment for effective pain management and recovery.

Easy Operation: Simple control panel with programmable modes for running and resting times, adjustable flow rate, and color-coded temperature display (39-59 degrees) for convenient monitoring

Portable Design: Lightweight with double-wall insulation, the 7-quart capacity bucket maintains cold temperatures for hours, combining portability with ample storage.

Flexible Pad: Soft, pliable pad suitable for broad areas like shoulders, featuring elastic material for effortless water flow and gentle compression, enhancing therapeutic effectiveness.

Features and benefits:

Portable: Portable system suitable for any medical setting or treatment at home.

Convenient: It measures and regulates temperature to provide therapeutic cold therapy without manual adjustment.

Simple: Intuitive LCD & button shows the treating time, working time, and temperature, easily lets users know when the unit is in the therapeutic zone, and advises when to add ice.Meanwhile, the transparent water tank makes it easier for users to observe the water level.

Comfortable: Adjust garments are made of soft breathable fabric, optimize temperature distribution, insulation and ensure precise placement of blankets.

CTS-V1 series

Size	290*260*270mm
Weight	3.74kg
Adapter	AC input 100-240v, AC50/60Hz,500mA Max
Mode	Continuous
Flow rate	Flow rate<2L/min, 5 level of water flow rate setting
Therapy Time	Max 90min

The manual measurements have a certain degree of error.

CTM-1 series

Up to 8 hours' cooling,Light weighted, small size,
Long-lasting Ice Therapy,
Various time mode,
Temperature display

Features and benefits:

Portability and Usability: The CTM-1 is designed for easy transport, ideal for emergency medical care scenarios.

Ease of Use: Features automatic cycling and personalized cooling cycles for knee surgery recovery, with a runtime of 20 or 40 minutes followed by a countdown pause.

Extended Ice Therapy: Utilizes solid insulation to slow ice melting, providing up to 8 hours of continuous therapy without needing frequent ice changes.

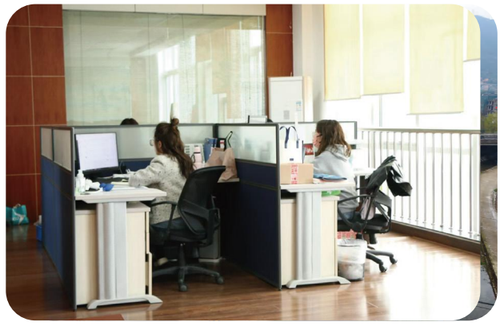

Quiet Operation: Operates silently with a brushless DC motor, ensuring peaceful use during rest or nighttime for effective pain management.

Size (L*W*H)	310*210*215mm
Weight	2.5kg(Empty)
Bucket volume	4L
Single therapy Time	Non-stop/60min for single mode

The manual measurements have a certain degree of error.
